

Helping Customers Innovate, Improve & Grow

Description

Vectron's VC-801 Crystal Oscillator (XO) is a quartz stabilized square wave generator with a CMOS output. The VC-801 uses fundamental or 3rd overtone crystals resulting in very low jitter performance, and a monolithic IC which improves reliability and reduces cost.

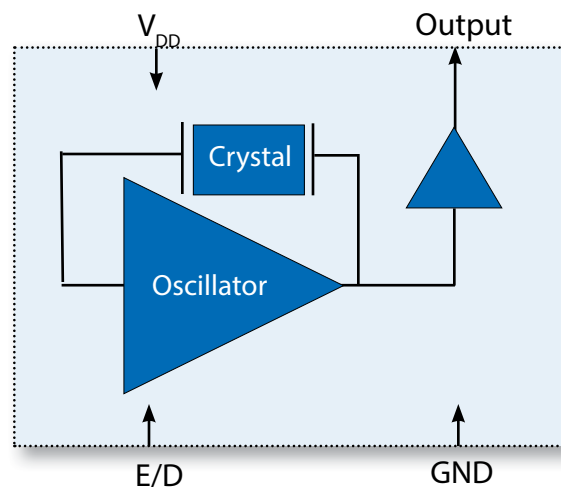

Features

- CMOS output XO
- Output Frequencies from 32.768kHz to 125.000MHz
- 5.0, 3.3, 2.5 or 1.8 V Operation
- Low Jitter Performance
- Output Disable Feature
- ± 20 ppm Frequency Stability Available
- Operating Temperature ranging from -55°C to $+125^{\circ}\text{C}$
- Small Industry Standard Package, 5.0 x 3.2 x 1.3 mm
- Product is compliant to RoHS directive  and fully compatible with lead free assembly

Applications

- SONET/SDH/DWDM
- Ethernet, GE, SynchE
- Storage Area Networking
- Fiber Channel
- Digital Video
- Broadband Access
- Base Stations, Picocells

| Output Enable/Disable ⁷ Output Enable Output Disable | V_{IH} V_{IL} | 4.0 | | 0.8 | V V |
| Disable time | t_D | | | 100 | ns |
| Enable Internal Pull-Up Resistor | | | 100 | | Kohm |
| Start-Up Time | t_{SU} | | | 8 | ms |
| Operating Temp (Ordering Option) | T_{OP} | -10/70, -20/70, -40/85, -40/105, -40/125, -55/105, -55/125 | | | °C |

- 1) The power supply should have by-pass capacitors as close to the supply and to ground as possible, for example 0.1 and 0.01uF.
- 2) Parameters are tested with the test circuit shown in Fig 1.
- 3) See Standard Frequencies and Ordering Information tables for more specific information.
- 4) Includes initial accuracy, operating temperature, supply voltage, shock and vibration (not under operation) and aging for ±50 and ±100ppm options.
- 5) Duty Cycle is measured as On Time/Period, see Fig 2.
- 6) Broadband Period Jitter measured using Wavecrest SIA3300C, 90K samples, see Application Note for Typical Phase Noise and Jitter Performance.
- 7) The Output is Enabled if the Enable/Disable is left open.
- 8) Only ±50 and ±100 stability option available for -40/105 °C, -40/125 °C, -55/105 °C and -55/125 °C Operating temperature range.

| Start-Up Time | t_{SU} | | | 8 | ms |
| Operating Temp (Ordering Option) | T_{OP} | -10/70, -20/70, -40/85, -40/105, -40/125, -55/105, -55/125 | | | °C |

1] The power supply should have by-pass capacitors as close to the supply and to ground as possible, for example 0.1 and 0.01uF.

2] Parameters are tested with the test circuit shown in Fig 1.

3] See Standard Frequencies and Ordering Information tables for more specific information.

4] Includes initial accuracy, operating temperature, supply voltage, shock and vibration (not under operation) and aging for ±50 and ±100ppm options.

5] Duty Cycle is measured as On Time/Period, see Fig 2.

6] Broadband Period Jitter measured using Wavecrest SIA3300C, 90K samples, see Application Note for Typical Phase Noise and Jitter Performance.

7] The Output is Enabled if the Enable/Disable is left open.

8] Only ±50 and ±100 stability option available for -40/105 °C, -40/125 °C, -55/105 °C and -55/125 °C Operating temperature range.

Specifications

Table 3. Electrical Performance, 2.5V Option

| Parameter | Symbol | Min | Typical | Max | Units |
|---|--|--|-----------|--------------------------------|----------------------------------|

| Low | High Impedance |

Reliability

Vecron qualification includes aging at various extreme temperatures, shock and vibration, temperature cycling, and IR reflow simulation. The VC-801 family is capable of meeting the following qualification tests:

Table 7. Environmental Compliance

| Parameter | Conditions |
|----------------------------|--|
| Mechanical Shock | MIL-STD-883, Method 2002 |
| Mechanical Vibration | MIL-STD-883, Method 2007 |
| Solderability | MIL-STD-883, Method 2003 |
| Gross and Fine Leak | MIL-STD-883, Method 1014 |
| Resistance to Solvents | MIL-STD-883, Method 2015 |
| Moisture Sensitivity Level | MSL 1 |
| Contact Pads | Gold (0.3 um min 1.0 um max) over Nickel |
| Weight | 62 mg |

Although ESD protection circuitry has been designed into the VC-801 proper precautions should be taken when handling and mounting. Vecron employs a human body model (HBM) and a charged device model (CDM) for ESD susceptibility testing and design protection evaluation.

Table 8. ESD Ratings

| Model | Minimum | Conditions |
|----------------------|---------|--------------------------|
| Human Body Model | 1500V | MIL-STD-883, Method 3015 |
| Charged Device Model | 1000V | JESD22-C101 |

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied at these or any other conditions in excess of conditions represented in the operational sections of this datasheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability. Permanent damage is also possible if E/D is applied before V_{DD} .

Table 9. Absolute Maximum Ratings

| Parameter | Symbol | Ratings | Unit |
|---------------------|----------|------------|----------|
| Storage Temperature | T_S | -55 to 125 | °C |
| Soldering Temp/Time | T_{LS} | 260 / 30 | °C / sec |

IR Reflow

Solderprofile:

The VC-801 is qualified to meet the JEDEC standard for Pb-Free assembly. The temperatures and time intervals listed are based on the Pb-Free small body requirements. The VC-801 device is hermetically sealed so an aqueous wash is not an issue.

Table 10. Reflow Profile

| Parameter | Symbol | Value |
|----------------------------------|-------------|---|
| PreHeat Time Ts-min Ts-max | t_s | 60 sec Min, 260 sec Max 150°C 200°C |
| Ramp Up | R_{UP} | 3 °C/sec Max |
| Time Above 217 °C | t_L | 60 sec Min, 150 sec Max |
| Time To Peak Temperature | T_{AMB-P} | 480 sec Max |
| Time at 260 °C | t_p | 30 sec Max |
| Ramp Down | R_{DN} | 6 °C/sec Max |

Tape and Reel

Table 6. Tape and Reel Information

| Tape Dimensions (mm) | | | | | | Reel Dimensions (mm) | | | | | | | # Per Reel |
|----------------------|-----|-----|-----|-----|-----|----------------------|------|-----|------|-----|------|------|------------|

Revision History

| Revision Date | Approved | Description |
|------------------|----------|---|
| October 17, 2014 | VN | Modified package drawing to reflect 1.40mm maximum height. Added Revision History Table. |
| January 20, 2015 | VN | Included ordering options for -40/105°C, -40/125°C and -55/105°C Operating temperature ranges |
| August 10, 2018 | FB | Update logo and ordering information, Add SNPB DIP ordering information, |
| March 22, 2019 | FB | Update logo, contact information, disclaimer, change SNPB DIP to SNPB, add weight and gold plating thickness. |
| April 30, 2020 | FB | Add tape and reel ordering option, updates and corrections as needed |

**Previous Ordering Information for Reference Only
Do Not Use to Build a New Part Number**

VCC4- B3B- xxMxxxxxxx

The ordering codes for the VCC4 were changed to VC-801 in 2016. If you had ordered a specific code based off this ordering method, it is still available for purchase under the old code however no new part numbers will be created using this system.
